

EQUISTRO® TRIFORCE

Preparation for exertion

**A nutritional feedingstuff rich in vitamins C and E, selenium and essential amino acids
For the anticipation in the drop in mid-season performance observed in athletic horses**

Powder - Ingredients :

- L-lysine : 740 mg/kg
- DL-methionine : 3 200 mg/kg
- Vitamin C (Triforce-C) : 150 000 mg/kg
- Vitamin E (alpha tocopherol) : 110 000 mg/kg

Nutritional value:

Stress, intensive effort, and high demand on the immune defences with environmental factors (UV radiation, polluting agents...) can lead to an increased release of free radicals, the origin of oxidative stress.

The vitamin C supplied by **EQUISTRO® TRIFORCE** is complexed on a mineral base (Triforce-C), which gives it 3 major advantages over the classic form :

- improved absorption and tolerance by the stomach thanks to its neutral pH
- cellular activity 4 times of the usual ascorbic acid
- long acting effect due to its slow elimination

Usage:

Nutritional feedingstuff for horses

The use of **EQUISTRO® TRIFORCE** is particularly recommended for athletic horses :

- for the maintenance of the active locomotor system (muscles, tendons, ligaments and joints) against oxidative stress
- to optimise the muscular metabolism and help increase the sporting performance

Recommended administration:

Administer **EQUISTRO® TRIFORCE** in the food or drinking water.

Pack size

- 600 g pot with measuring scoop
- 1,8 kg bucket with measuring scoop

Can be administered in complete confidence in accordance with local and international rules up until the day of an official competition or race.

Adult horses

Standard sized horses (500 kg)	1 scoop (= 20 g) per day
Light horses	½ scoop (= 10 g) per day
Foals and ponies	¼ scoop (= 5 g) per day
