

EQUISTRO® AZODINE

Muscle electrolyte restoration

Complementary feedingstuff rich in calcium and sodium salts

Powder - Ingredients :

- Calcium carbonate : 40 %
- Sodium chloride : 40 %
- Calcium lactate: 20%

Nutritional value:

Electrolyte balance and the interactions between different electrolytes have an impact on muscle function in the horse. An imbalance can disrupt the muscle function in otherwise healthy horses.

During exertion, an important quantity of electrolytes are lost via sweat, whilst sodium and chloride account for the majority, calcium and magnesium are equally lost. A regular supply of sodium and calcium can limit the risk to muscle tension episodes in horses. **EQUISTRO® AZODINE** supplies electrolytes particularly abundant in equine sweat: sodium, chloride and calcium.

Usage:

The sodium and calcium levels in **EQUISTRO® AZODINE** are particularly recommended in association with **EQUISTRO® EXCELL E/ EQUISTRO® SUPER E** to aid in the muscular recovery of horses.

Pack size

- 2 kg pot
with measuring scoop

Recommended administration:

Add **EQUISTRO® AZODINE** to the feed ration or drinking water.

Adult horses

Standard sized horses (500 kg)	2 scoops (= 50 g) per day
Light horses and ponies	1 scoop (= 25 g) per day

Can be administered in complete confidence in accordance with local and international rules up until the day of an official competition or race.
