

EQUISTRO® FLEXADIN

Joint mechanism support

High quality glycosaminoglycan (GAGs) and Devils claw (*Harpagophytum procumbens*) formula. Maintaining the quality and comfort of the joint mechanism of the athletic horse

Powder - Ingredients (per 5g scoop) :

- Glucosamine HCL : 1 800 mg
- Chondroitin sulphate : 600 mg
- Manganese (IPALIGO®) : 66,6 mg
- Devils claw (*Harpagophytum procumbens*) : 300 mg

Nutritional value:

Chondroitin sulphate is a GAG, a key constituent of joint matrix proteoglycans and hence cartilage health.

Glucosamine participates in hyaluronic acid synthesis via synoviocytes. When present glucosamine and chondroitin sulphate together have a synergistic effect for the maintenance of cartilage structure.

Manganese, a key trace element central to the antioxidant system, also plays a vital role in cartilage synthesis.

Devils claw (*Harpagophytum procumbens*) is known for its joint mechanism virtues.

Usage:

Complementary feedingstuff for horses :

EQUISTRO® FLEXADIN is recommended for athletic horses for which an optimal joint mechanism is desired, particularly during training programmes (racing and competing season), when the joints (cartilage, tendons and ligaments) are being heavily worked.

Recommended administration:

Add **EQUISTRO® FLEXADIN** to the feed while respecting locally applicable withdrawal rules for racing and competition horses.

Pack size

- 600 g pot with measuring scoop
- 1 050 g pot with measuring scoop

Contains an ingredient susceptible to render a positive doping test. Advised withdrawal time indicated

Adult horses	Initial programme	Maintenance programme
standard sized horses (500 kg)	3 scoops twice daily for 3 to 6 weeks	1 scoop twice daily
Heavy horses (600 kg)	4 scoops twice daily for 3 to 6 weeks	2 scoops twice daily
Light horses and Ponies	1 or 2 scoops twice daily for 3 to 6 weeks	½ scoop twice daily
